Hi Courtney,

Currently, we use a count of 12 states with active WQT policies - This includes states with statute, rule, policy, guidance, or draft guidance that specifically addresses water quality trading at the state level as of November 2013. It includes Colorado, Florida, Idaho, Maryland, Minnesota, Montana, Ohio, Oregon, Pennsylvania, Virginia, Washington, and Wisconsin. This does not include states with individual watershed-specific authorized trading frameworks or pilot programs, such as Connecticut. It also does include states that are in the process of developing guidance (e.g., Montana and Vermont)

In terms of active trading, attached is an excerpt from our In It Together report on WQT, published in 2012. Washington DC has since implemented a stormwater trading program, and I'm sure there are a couple others, but it is still, to my knowledge, the most up to date summary of what is out there.

I hope this is helpful.

Best,  
Carrie
